New science at the ultrafast frontier
Watching the making and breaking of chemical bonds is the holy grail of chemistry, says Thomas Brabec, and ultrashort light pulses are bringing it within our reach

33 FEATURES
The magnetism of carbon
Carbon should be one of the least magnetic elements, but recent observations are challenging conventional wisdom. Michael Coey and Stefano Sanvito explain

39 FEATURES
Molecular devices and machines
Nano-scale shuttles, elevators and walking bipeds are just some of the outlandish machines that can be made from molecules, report Vincenzo Balzani, Alberto Credi and Margherita Venturi
